

Claims

1. A crop divider for a harvesting assembly, the crop divider is provided with a deflector, the deflector is mounted to the harvesting assembly by a pivot link having a pivot axis, the deflector can be pivoted about the pivot axis into a transport position and an operating position, the deflector is locked into the operating position by an arresting element having a locking position, characterized in that when the arresting element is in the locking position for the operating position of the deflector, the arresting element encloses and locks the pivot link on both sides of the pivot axis.

2. The crop divider as defined by claim 1 wherein the pivot link is mounted on a first tube and a second tube.

3. The crop divider as defined by claim 2 wherein the arresting element is slidably positioned on one of the first and second tubes.

4. The crop divider as defined by claim 3 wherein the arresting element is biased by a spring into the locking position.

5. The crop divider as defined by claim 4 wherein the arresting element is designed to lock the pivot link also in the transport position.

6. The crop divider as defined by claim 5 wherein a part of the pivot link, which can move relative to the arresting element, is provided with a recess, in which the arresting element extends in the transport position locking the pivot link.

7. The crop divider as defined by claim 1 wherein the arresting element is designed to lock the pivot link also in the transport position.

8. The crop divider as defined by claim 7 wherein a part of the pivot link, which can move relative to the arresting element, is provided with a recess, in which the arresting element extends in the transport position locking the pivot link.
